www.linkedin.com/in/lark-mariano-077a21263

CORE SKILLS

- **Programming Languages:** Java, JavaScript, SQL, HTML, CSS
- **Frameworks & Tools:** Spring Boot, Hibernate, JPA, Maven
- **Databases:** MySQL, MongoDB
- **Frontend:** ReactJS, AngularJS
- **Cloud & DevOps:** Docker, Kubernetes, AWS (EC2, S3, RDS), CI/CD (Jenkins, GitHub Actions)
- **Other:** JWT Authentication, Validations, Lombok, Lambdas, Microservices, REST API, Agile/Scrum

CERTIFICATES

- **Full-Stack Web Development Course** (96HRS)
- **Advance Python Programming** (3DAYS)
- **The Nature of Data and Relational Database Design** (5DAYS)
- **Career Service Professional Eligibility** (Government)
- **IBM DevSecOps - Security & Automation for DevOps**

PROFESSIONAL SUMMARY

Results-driven Java Developer / Software Engineer with more than 3 years of experience in designing, developing, and maintaining scalable applications. Skilled in Java, Spring Boot, REST APIs, Microservices, and SQL/NoSQL databases. Experienced in full software development lifecycle (SDLC), system optimization, and delivering secure, high-performance solutions. Adept at collaborating with cross-functional teams and contributing to both backend and frontend development (ReactJS/AngularJS).

WORK EXPERIENCE

IBM IBM Solutions Delivery, Inc. 2026 - PRESENT

Java Application Developer & Web Technologies

- Design and implement RESTful APIs for seamless system integration.
- Collaborate with cross-functional teams (QA, UI/UX, DevOps) to deliver high-quality software solutions.
- Write clean, scalable, and well-documented code following best practices.
- Participate in code reviews to ensure code quality and maintainability.
- Ensure application security and data protection standards are followed.

Bureau of Fisheries and Aquatic Resources 2023 - 2026

Java Backend Developer / System Information Researcher II

- Designed and developed RESTful APIs using Spring Boot and Hibernate, improving system response time.
- Built and maintained microservices architecture for scalable enterprise applications.
- Developed frontend features with ReactJS/AngularJS, improving user experience and reducing bugs.
- Collaborated with cross-functional teams in an Agile/Scrum environment, delivering features on-time and within scope.
- Optimized SQL queries and database indexing, improving data retrieval speed.

Land Transportation Office 2020 - 2023

Database Administrator / Computer Programmer I

- Designed and implemented database schemas, stored procedures, and triggers to support internal and public-facing applications.
- Monitored and tuned database performance, reducing query execution time.
- Ensured data integrity and security in compliance with government IT policies.

Commonwealth Hospital and Medical Center 2019 - 2020

Database Administrator

- Administered and maintained hospital information system (HIS) databases to ensure reliability and security of medical records.
- Provided support for database-related issues and collaborated with developers for system enhancements.

EDUCATION

Bachelor of Science in Information Technology 2015 - 2019
Bulacan State University

PROJECTS

Showcase of end-to-end software development projects, including enterprise-level company initiatives and independent freelance solutions built using Java, SpringBoot, REST APIs, microservices, and modern frontend frameworks. This also includes freelance jobs related to the Information technology industry.

○ E-planning and Budget Monitoring System (EPBMS)

A web-based platform designed to digitize and streamline government planning, budgeting, and financial tracking processes. The system enables agencies to create, submit, review, and approve annual work plans while maintaining budget allocation visibility. It includes automated reporting, approval workflows, audit logs, and real-time budget utilization tracking to support data-driven decision-making and compliance with government financial policies.

- Improved tracking of budget requests and utilization across departments by up to 90%.
- Reduced manual document handling and spreadsheet errors by approximately 80%.
- Accelerated budget review and approval processing time from weeks to 2-5 days, depending on complexity.
- Enabled real-time budget visibility, improving compliance and financial reporting accuracy.

○ Fisheries Intra-Network Database System (File Repository -FINDS)

An internal document management and information repository system built to centralize fisheries-related datasets, reports, research documents, and operational files. The system supports secure storage, metadata tagging, version control, hierarchical access permissions, and fast document retrieval. Designed for collaboration across multiple divisions, it improves data governance, traceability, and organizational knowledge sharing.

- Reduced document retrieval time from hours to under 2 minutes.
- Eliminated duplicate file storage and lost documents, improving data integrity by 95%.
- Increased collaboration efficiency across divisions, supporting over 100+ active users with controlled access and versioning.
- Reduced reliance on physical storage, lowering storage and maintenance overhead.

○ Land Transportation Management System (LTMS)

A modular system developed to support administrative processes related to transportation regulation, including vehicle registration records, licensing transactions, compliance monitoring, and document processing. The platform automates database record management, user request processing, and reporting, ensuring accuracy and efficiency while reducing manual paperwork and processing time.

- Streamlined record processing workflows, reducing manual processing by 70%.
- Improved accuracy of stored records with automated validation and database indexing.
- Enabled faster reporting and analytics generation, reducing report preparation time from days to less than 1 hour.
- Increased operational transparency and record traceability for audit requirements.

○ Fashion Sense - Ecommerce (Freelance Project)

A full-stack e-commerce platform designed to provide a seamless online shopping experience for fashion products. The system enables customers to browse collections, manage accounts, add items to cart, and complete secure online purchases. It includes an admin dashboard for product management, inventory tracking, order processing, and sales monitoring. The platform is optimized for performance, responsiveness, and user-friendly navigation to enhance customer engagement and conversion rates.

- Developed a responsive and mobile-friendly interface to improve user experience across devices.
- Implemented secure user authentication, cart management, and checkout functionality.
- Integrated real-time inventory tracking to prevent overselling and improve stock accuracy.
- Built an admin dashboard for product CRUD operations, order management, and sales reporting.
- Improved page load performance and optimized database queries for faster transaction processing.

○ Atlas Capture - Data Annotator (Contractor) - October - April 2026

Data Annotator and Quality Assurance specialist, supporting AI and machine learning model development by accurately labeling datasets and ensuring high-quality data outputs. Collaborated with project guidelines to maintain consistency, precision, and reliability across large-scale annotation tasks.
